

Group 4 Members: Isaac Supeene, Braeden Soetaert

Besides our contracts we also have 4 test classes located in the test directory that exercise our classes. With test unit installed on the given computer these tests can be run to exercise our classes. The `matrix_test` and `vector_test` are mainly copied from the Matrix class' tests and slightly modified for our code. The `tridiagonal_matrix_test` is a heavily modified version of matrix test that only uses tridiagonal matrices. The `matrix_builder_test` is a test we made to test the functionality of our builders that work with our abstract builder.
